

How to clean your hands

Tips sourced from the WHO

1

Wet your hands with clean, running water and lather up with soap.

2

Be sure to clean all surfaces of your hands. Rub your hands palm to palm.

3

Clean the back of your hands,

4

between your fingers,

5

and under your nails. Scrub for at least 40 seconds and then rinse.

6

Dry your hands with a clean towel, or air dry.

If you're using hand sanitizer - follow the same steps to clean all surfaces of your hands regularly throughout the day. Keep rubbing until the gel has dried, about 40 seconds.
